

XM Satellite radio has been given one of two licenses to satellite broadcast in the United States. They need your help on a key matter. Please reject NAB's petition 04-160, which would limit XMRadio's ability to meet the needs of their customers.

It is hard for these satellite radio companies to make money. It is costing XMRadio \$100 to acquire each customer. Anything that provides them the opportunity to get a paying customer and serve them in a way they remain customers, will keep these "birds" flying and continue to provide competition in an industry where consolidation is rapidly reducing this very American market driver.

Best regards,

Chris V. Rathe
